NORTH OF GEOPARK

MORNING

- **7.00 to 7.45 AM**, BREAKFAST

- **8.00 AM**, DEPARTURE

PLACES:

- CALDEREROS HILLS
- ZAFRA CASTLE
- ROCK PAINTINGS OF ANCHUELA
- MONUMENT TO ARAGONITO
- PETROGLYPHS AND FOSSILISED FOOTPRINTS (RILLO)
- ARAGONCILLO PETRIFIED FOREST
- CELTIBERIC ARCHEOLOGICAL SITE “THE CEREMENŔO” (HERRERÍA)
- Marta Chordá (UCM)
- ARAGONITO OUTCROP (COBETA)

- **2.30 PM**, LUNCH IN OLMEDA DE COBETA

AFTERNOON

- **3.30 PM**, DEPARTURE

PLACES:

- SACRED TREE FOREST (OLMEDA DE COBETA)
- PEÑA MOÑUZ HILLFORT
- ALPETEA CASTLE HILL
- **6.00 PM**, ARRIVAL IN MOLINA AND SHORT BREAK
- **7.00 PM**, CULTURAL ASSOCIATIONS POPULAR PARTY AND DINNER IN SAN FRANCISCO

OBJECTIVES:

TODAY, WE'LL GO OUT OF THE NATURAL PARK: TO THE NORTH OF MOLINA DE ARAGON AND THE ALTO TAJO GEOPARK. ONE OF THE ACHIEVEMENTS OF THE CANDIDACY HAS BEEN TO SHOWCASE THE NATURAL RESOURCES OF CALDEREROS HILLS AND VALLEY OF MESA RIVER WITH SIGNS AND EXPLANATION PANELS. THE VISIT BEGINS IN ONE OF THE PLACES IN WHICH WE HAVE BEGUN TO WORK: CALDEREROS HILLS AND ZAFRA CASTLE. THEN, WILL VISIT TO THE PETRIFIED ARAGONCILLO FOREST. THIS PLACE HAS AN IMPORTANT SCIENTIFIC INTEREST BUT NEED A FIGURE OF PROTECTION TO WORK IN ITS RELEASE

1. CALDEREROS HILLS AND ZAFRA CASTLE: THE CASTLE IS A CLEAR EXAMPLE OF BUILDING IN HARMONY WITH THE ENVIRONMENT. CALDEREROS HILLS IS A PROTECTED PLACE THROUGH INTERVENTION AREA RESIDENTS. THEY CHOOSE THEIR LANDSCAPE IN PLACE OF EARN MONEY WITH WIND MILLS

2. ANCHUELA ROCK PAINTINGS: IN MOLINA DE ARAGÓN AND THE ALTO TAJO GEOPARK THERE ARE NUMEROUS EXAMPLES OF CAVE PAINTINGS. IT IS AN EXAMPLE OF UNUSED HERITAGE UNTIL THEIR STUDY AND PROTECTION.

3. MONUMENT TO ARAGONITE: THE PEOPLE OF THE AREA VALUED THIS GEOLOGICAL RESOURCE LONG BEFORE KNOWING THE EUROPEAN GEOPARK NETWORK.

4. ARAGONCILLO PETRIFIED FOREST: THIS PLACE IS UNIQUE IN THE WORLD FOR ITS AGE AND KEEP TREES IN POSITION OF LIFE. IT IS TOO AN EXAMPLE OF UNUSED HERITAGE WAITING TO HAVE A FIGURE OF PROTECTION FOR ITS DISSEMINATION. THIS IS ALSO THE SITUATION OF DINOSAUR FOOTPRINTS AND PETROGLYPHS OF RILLO .

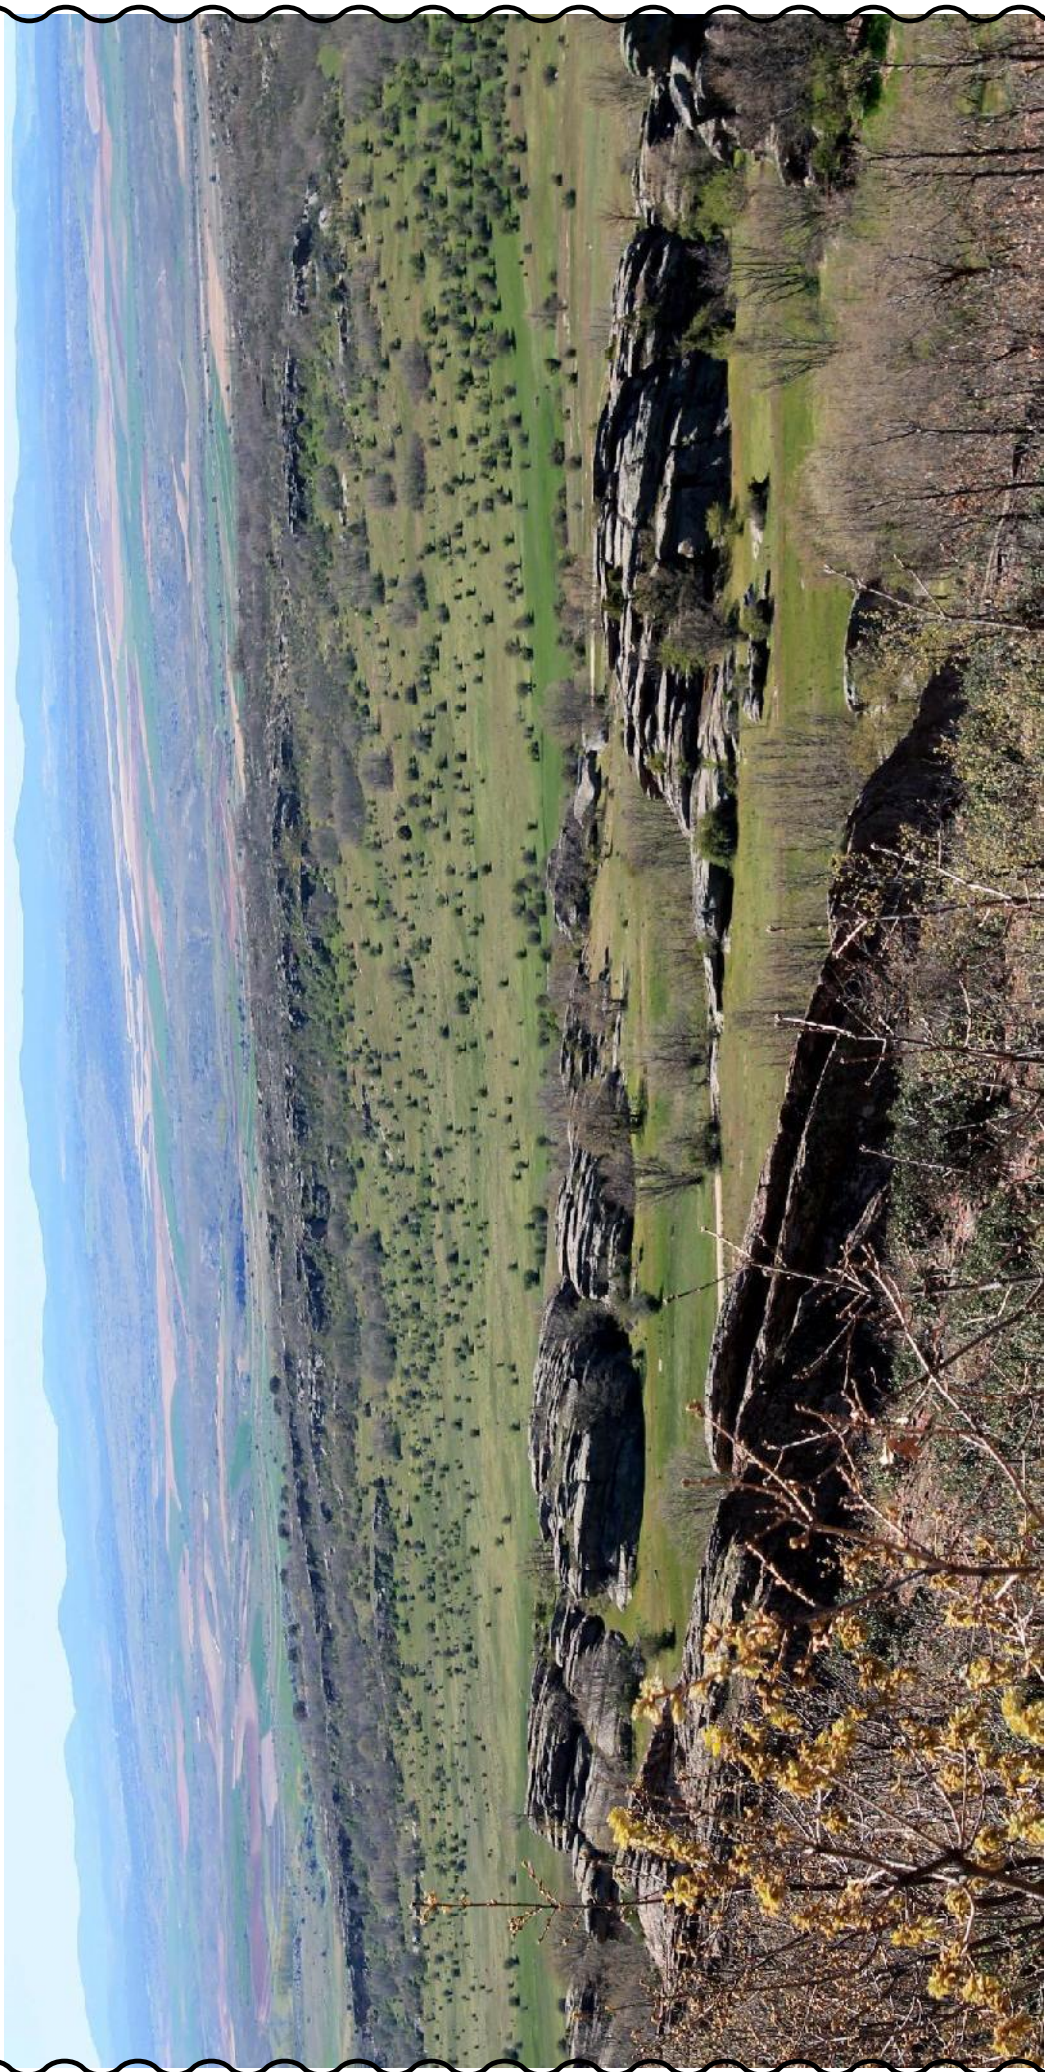

5. THE CEREMEÑO HILLFORT (HERRERÍA): THE CELTIC HERITAGE IS VERY IMPORTANT IN MOLINA AND THE ALTO TAJO GEOPARK. THE HERRERÍA HILLFORT IS AN EXAMPLE OF ARCHAEOLOGICAL SITE REBUILT AND MARKED WITH INFORMATION PANELS

6. ARAGONITE-RESERVOIR: SAMPLE OF GEOLOGICAL HERITAGE.

7. PEÑA MOÑUZ HILLFORT (OLMEDA OF COBETA) IS ONE OF THE HILLFORT MORE CHARACTERISTIC OF GEOPARK. HIGHLIGHTS ITS DEFENSIVE SYSTEM AND ITS BIG WALLS. THE CEREMEÑO HILLFORT IS AN EXAMPLE OF HERITAGE ADVANTAGE. THIS IS THE MODEL WE WANT TO ADAPT IN OTHER HILLFORTS.

THE FINAL OBJECTIVE OF THIS DAY IS SHOW EVERYTHING THAT WE ACHIEVED WITH THE GEOPARK CANDIDACY OUT OF NATURAL PARK. AT THE SAME TIME SHOWN GREAT POTENTIAL IN THIS REGION AND THE IMPORTANCE OF BECOMING GEOPARK TO ACHIEVE SUSTAINABLE DEVELOPMENT RESOURCES

Laguna Honda de Campillo

LA CUBIERTA DE CALDOANTA

No es común que se encuentren las cubiertas de las lagunas, ya que estas se encuentran a una gran profundidad, por lo que se requiere de maquinaria pesada para poder acceder a ellas. En este caso, la laguna Honda de Campillo es una excepción, ya que su cubierta se encuentra a una profundidad de 10 metros.

La laguna Honda de Campillo es una laguna subterránea que se encuentra a una gran profundidad, por lo que se requiere de maquinaria pesada para poder acceder a ellas. En este caso, la laguna Honda de Campillo es una excepción, ya que su cubierta se encuentra a una profundidad de 10 metros.

ESTRUCTURA DE LA LAGUNA

La laguna Honda de Campillo es una laguna subterránea que se encuentra a una gran profundidad, por lo que se requiere de maquinaria pesada para poder acceder a ellas. En este caso, la laguna Honda de Campillo es una excepción, ya que su cubierta se encuentra a una profundidad de 10 metros.

OTRAS LAGUNAS

En esta zona se encuentran otras lagunas, como la Laguna Llave y la Laguna de la Cruz, que también son importantes para la zona.

PECES DE LA ZONA

En esta zona se encuentran varios tipos de peces, como el pez de la zona, que también son importantes para la zona.

LAGOON OF CAMPILLO

The image shows a close-up of a rock surface, likely a cave wall, covered in ancient paintings. The rock has a mottled, textured appearance with various shades of beige, tan, and brown. Overlaid on this natural texture are several areas of reddish-brown ochre pigment. These pigments form abstract, somewhat irregular shapes and patches, some of which appear to be part of larger, more complex designs that are partially obscured or faded. The overall effect is one of ancient human artistry integrated with the natural environment. The entire image is enclosed within a decorative black border with a repeating wavy, scalloped pattern.
